

Guidelines for publication lists for applicants

Please submit your publication list electronically. Since the list will be redistributed electronically, it is important to follow the guidelines below.

Publications should be divided into the following 3 categories:

- a) original work published in refereed journals
- b) reviews published in refereed journals
- c) other publications (for example, congress and book contributions, monographs)

Please list your **original work** separately from other publications. Original scientific publications should be numbered, listed in chronological order (from past to present), and include impact factors (IF). Please do not include manuscripts that have been submitted but not yet accepted for publication.

The category A 'original work' should only include original scientific publications from refereed journals. These journals are generally listed in the *Journal Citation Report* of the Institute for Scientific Information.

Please note: The following types of publications are not "original" and should be included in category C 'other publications':

- papers published in special editions and supplements (e.g., page numbers marked with S, e.g., 24S-28S)
- Letters, Comments, Editorials, Errata
- Short reports, congress papers, etc.

Citations should be made in keeping with international criteria, and their format should correspond to the example below. Please note the following:

- The names of authors should be included.
- The titles of all publications must be specified.
- Journal names should be abbreviated according to the style used by the National Library of Medicine (NLM).
- The year of publication, volume, and starting and closing number of the journal should be specified.

Example:

1. Marti HH, Young HH, Pfeilschifter J, Bauer C (1994)

Hypoxia and cobalt stimulate lactate dehydrogenase (LDH)

Activity vascular smooth muscle cells.

Pflügers Arch, 429: 216-22
