Information on Writing the Doctoral Thesis
PhD Doctoral Examination Procedure for the Faculty of Medicine at the University of Bonn

Before submitting your application for admission to the examination phase to the Doctoral Office, you can send your doctoral thesis to us as a Word document prepared in accordance with the information provided for a formal check. The email address is phd.promotionsbuero@ukbonn.de.

Font type and size, line spacing
Please note: When submitting the application for admission to the examination phase, the doctoral thesis must no longer be submitted to the Doctoral Office in printed form, but instead only in electronic form. A paper version is still required, however, for later submission of obligatory copies to the library.

The doctoral thesis must be written single-sided on wood- and acid-free white paper (80 g). The typeface must be clear, even and deep black, using Arial font size 12, with a line spacing of 1.5 lines and justified alignment. Only main headings are to be written using font size 14, bold and left aligned. This does not apply to the main headings in the table of contents (please use font size 12 there).

Figures and tables
Please prepare legends for figures and tables as described above, but with a line spacing of 1.0, so that the legends stand out from the rest of the text. For the same reason, please also write Fig. and Tab. in bold (example: Fig. 1: Legend).
When producing figures and tables and the text they contain and image quality, remember that only high quality can be accepted and that the figures and tables must also be clearly legible in subsequent DIN A5 copies. If a figure or table must be included at right angles in the doctoral thesis, the legend must also be at right angles, but the page number must remain in the usual top center location (not at right angles at the fold).

Justified alignment
Justified alignment often creates large gaps in the text that you have to minimize with automatic or manual hyphenation. This hyphenation should not be done until the thesis is finished and no longer requires any changes. Experience has shown that automatic hyphenation is highly susceptible to errors and manual hyphenation should therefore always be preferred.

Margins
The right and left margins are 2.2 cm, the top margin is 3.2 cm and the bottom margin is 3.0 cm.

Page numbers
Page numbers are located at the top center of the page, 1.6 cm from the top edge, beginning with the table of contents (starting on page 3 if there is no dedication, or page 5 if there is a dedication).

Outer cover, pages 1 and 2
Please prepare using the sample. Leave the layout unchanged and only add the information for the doctoral student. Page numbers begin with the table of contents. Three copies of the doctoral thesis must be submitted in DIN A4 format, bound with a soft cover and hot glue
binding, with the soft cover printed analogous to the first page of your doctoral thesis. Doctoral theses must be printed single-sided.

**Dedication, lists (Table of Contents, List of abbreviations, References, Index, etc.), annexes**

- If the doctoral thesis includes a dedication:
  - First page as in sample 1
  - Second page as in sample 2
  - Third page: Dedication
  - Fourth page: empty
  - Fifth page: Table of Contents
- If the doctoral thesis does not include a dedication:
  - First page as in sample 1
  - Second page as in sample 2
  - Third page: Table of Contents

The list of abbreviations follows directly after the table of contents, where it must also be included with a page number. If you want to include acknowledgments, please put them at the end of your doctoral thesis, before the curriculum vitae.

**Special characters**

Please always use superscript format for ® ©, that is: ® ©

**Units of measure**

Please ensure that a space is always included between the number and unit of measure: 10 %, 11 cm.

**Decimal numbers**

When you take data from English sources, remember that the English and German formats for decimal numbers are different.

- German: 16,79
- English: 16.79

**Length**

Doctoral theses should, as a rule, be no longer than 100 pages.

**Specialized terms**

Specialized terms must be used correctly with respect to form and content, and defined if necessary. They must be written in an orthographically consistent manner in the doctoral thesis. Compound (German-English) terms should be avoided.

**Abbreviations**

Abbreviations must comply with normal international standards and must be explained.

**Doctoral thesis**

A doctoral thesis must represent a considerable academic achievement and demonstrate the candidate’s ability to perform independent research. The information below is intended to make it easier to write the doctoral thesis.
Title
The title of the doctoral thesis should be memorable and briefly summarize the contents. Abbreviations should be avoided in the title. If the title has two parts, ensure correct punctuation (e.g. Essential Hypertension: Psychophysiological Studies of Persons at Risk).

First and second pages
Please use the sample to complete the first and second pages, leaving the layout unchanged. The year on the first page is the year of publication. Please be careful if you submit the thesis at the end of the year, but it will not be printed until the following year. It takes around 80 days before the permission to print is issued after admission to the examination phase.

“Day of oral examination” field: Nothing should be entered in this field on the 2nd page when the application for the examination phase is submitted. You enter the examination date later, before the obligatory copies are submitted to the University. Please leave this field empty in your doctoral thesis when you submit your application for the examination phase.

Monograph
Layout / Table of Contents
The doctoral thesis must be clearly and logically structured in accordance with standard practices for academic literature. Please note the requirements in the sample template.

Introduction
The introduction should briefly present relevant literature for the topic and lead up to the research question addressed in the thesis. The research question addressed in the thesis should be clearly formulated. It must satisfy academic standards and allow the author’s own contribution to be clearly identified. If the doctoral thesis presents a literature review and analysis, reasons must be provided that demonstrate why this is of scientific value. If the doctoral thesis presents casuistry or collective casuistry, its scientific value must also be demonstrated. Simply describing the course of a disease is not sufficient.

Material and methods
A clear description of the methods used must be provided. If the doctoral thesis is part of a larger project by a working group, the contributions by other researchers must be identified. The scientific objective (comparison with own control group, comparison with results in the literature, review of diagnostic or prognostic criteria, etc.) must be clearly formulated for studies of medical records, especially retrospective studies.

Results
The results of one’s own research must be presented clearly and precisely, supplemented by tables and figures, if necessary. Tables and figures must have explanatory legends and be sequentially numbered. Tables and figures with their accompanying legends should be self-explanatory when considered on their own, separated from the text as a whole. They should be descriptive in nature and should not be shortened to the length of a typical heading. When reproducing halftone or color images (e.g. morphological images), original photographs or comparable top quality images must be used in all copies of the doctoral thesis. Quantitative studies must use appropriate statistical analyses. The results of other researchers must be identified as such.

Discussion
The discussion must critically discuss the results of your own research based on the research question and current academic literature. Conclusions should be drawn that show the value of
the doctoral student's research based on publications by other authors and the research question formulated in the introduction.

**Abstract**
The abstract briefly summarizes the entire work, from the research question to conclusions, and must be understandable when considered on its own. It should be no longer than one page, if possible, and in no case longer than two pages.

**List of figures**
All of the figures (Fig., title, page number) are listed here.

**List of tables**
All of the tables are listed here.

**References**
See the information in the “References” section.

**Acknowledgments**
If needed, your acknowledgments are included here. If you do not want to include acknowledgments, skip this section and continue with your curriculum vitae.

**Curriculum vitae**
The curriculum vitae should provide a short, concise description (around 1–2 pages) of your professional career in table form. Parent or sibling careers should not be included. The curriculum vitae is also not dated.

---

**Publication Doctoral Thesis**

**Layout / Table of Contents**
The doctoral thesis must be clearly and logically structured in accordance with standard practices for academic literature. *Please note the requirements in the Doctoral Examination Regulations and the sample templates.*

**Statement regarding your contribution**
Please complete the form for declaring your contribution that has been uploaded to the PhD website. Submit a completed and signed copy loose with the other required documents together with your application for the examination phase. You can include an unsigned copy in the “Statement” section of the thesis itself.

With regard to the publication for which the doctoral student is first author, the doctoral student must have undertaken the predominant share of the planning, data collection, evaluation and interpretation for the academic work, and must have written the first version of the manuscript him or herself. With regard to the publications for which the doctoral student is co-author, he or she must have undertaken a significant share of the planning, data collection, evaluation and interpretation for the academic work. Appropriate information must be provided to the publisher as proof of the doctoral student’s contribution to the publications.
The publication doctoral thesis must have the following layout in accordance with the sample template on the website:

1. Abstract
2. Introduction and aims with references
3. Publications
4. Discussion with references
5. Acknowledgments
6. Statement
7. Curriculum vitae

References
The references section is in alphabetical order without numbering. Particular attention must be paid to formatting the author information in the text and references section carefully in accordance with our instructions with respect to periods, commas, spaces, semicolons, etc.

- Use round brackets in the text, no brackets in the references section
- Use justified alignment in the reference section
- Write complete page numbers, that is: 12–16, not: 12–6
- No period at the end of sources in the references section.
- Do not use periods when abbreviating journal titles

1. Only works that are mentioned in the text are cited. Unpublished observations, personal communications and brochures from companies, etc. cannot be cited. They can be mentioned in the text in brackets.
2. Citations are arranged in alphabetical order based on the names of the authors. A uniform citation style must be used. It must include: the names of all authors of an article, including all initials; title of the publication; journal or book title, including publisher, if applicable; year of publication; volume; first and last pages of the publication (please use complete page numbers, e.g. 123–139, NOT: 123–39).
3. An author’s name is followed by an initial for the first name, or multiple initials if there are multiple first names, then a comma, the next author, etc. The last author is followed by a period and the full title of the publication.
4. For journal articles, the name of the journal follows, abbreviated according to World Medical Periodicals (e.g. named at regular intervals in “Current Contents” or available from various scientific publishers). The name of the journal is followed by the year of publication, a semicolon, the volume, a colon and, finally, the first and last pages of the article.
5. For book articles, the author names and title (same format as for journal articles) are followed by a period, “In:” and the editor name(s), formatted similar to the names of article authors. The last editor is followed by a comma, the abbreviation “ed.” or “eds.”, the book title, the place of publication, a comma, the publisher, a comma, the year of publication, a colon and the first and last pages of the article cited.
6. When citing an entire book, the authors and title are first shown as for a journal article. This is followed by the place of publication, a colon, the publisher, a comma and the year of publication.
7. If an author or group of authors appear with more than one publication in the same year of publication, to avoid confusion between the citations the year of publication is followed by a lowercase letter, beginning with a, corresponding to the order of publications, e.g. (1993 a), (1993 b), etc.

**Examples**

**Internet citations**

Author of the webpage, year: title. path (date accessed: xx.xx.xxxx)

The author is usually the publisher of the website (e.g. Statistisches Bundesamt). If no year of publication is indicated on the webpage, the current year is used. The complete path (“URL”) is shown instead of a place of publication. The access date must be shown because Internet webpages are updated from time to time or, in worse cases, no longer available.

**Literature citations in the text**

The **recommended style for citations** is the **author-date style**.

Publications must be carefully cited for all referenced authors in all sections of the doctoral thesis, based on the following information.

Publications are cited using only the author name(s) followed by the year of publication. First names are not indicated.

If a publication has more than two authors, only the first author is named, followed by “et al.” If there are two authors, both are named, separated by “and”.

If multiple publications are cited at the same time, the citations are arranged in alphabetical order and citations with the same name are ordered based on the year of publication.

Literature citations are either integrated into full sentences (e.g. Staab et al. (1984) show that ...) or added in brackets at the end of a sentence (Fischer and Poschmann, 1975; Langlotz, 1980, Müller et al., 1990 a, 1990 b).

**Further information**

**Human or animal studies**

If studies were conducted on human subjects, the doctoral thesis must include a statement that the studies were performed based on the revised World Medical Association Declaration of Helsinki (2013) and corresponding legal bases.

If animal studies were conducted, a statement about the approval for the experiment must be included.
Ethics vote
The question of whether an ethics vote is required should be discussed with your doctoral supervisor and, in cases of doubt, the ethics committee should be consulted for advice. If a vote is needed and you have the vote when you submit your doctoral thesis to the Dean's Office, the corresponding reference number must be documented in the doctoral thesis, either in the introduction at the end of the research question (“This project was approved by the ethics committee under # xx.”) or at the end of the Method section (“This methodology was approved by the Ethics Committee under reference no. xx.”).

Printing and publication
It is absolutely necessary to contact Ms. Elena Dyck/USL (see contact information below) before the thesis is submitted.

Elena Dyck
Bonn University and State Library
MNL Branch Library
Nussallee 15 a
53115 Bonn

Phone: +49 (0) 228 73-9533
Email: dissonline@ulb.uni-bonn.de
Please arrange an appointment with Ms. Dyck.

Final remarks
These are general recommendations, and have to be modified for doctoral theses in certain disciplines. It is therefore strongly recommended that the candidate contact the professor representing the department’s subjects early in the process to discuss any special factors that apply.
